

Position Your Myositis Grant for Success

a webinar by TMA medical advisor and research committee chair

Dr. Conrad “Chris” Wehl

Tuesday, April 9, 2019 at 12 noon ET

The Myositis Association recognizes that the myositis patient’s best hope for a cure lies in scientific research to develop a better understanding of myositis diseases, find better treatments, and, ultimately, discover a cure for all forms of myositis. TMA is currently seeking applications for pilot funding and fellowship grants for promising myositis research projects.

In this webinar, TMA medical advisor and research committee chair Dr. Conrad “Chris” Wehl speaks to investigators who hope to submit a research grant application as well as institutional leaders who advise trainees and early career faculty. He will:

- Outline the TMA grant process
- Discuss what the TMA Research Committee looks for in a strong grant application
- Respond to participants’ questions about how investigators can position their application for success

Dr. Wehl is a professor of neurology at Washington University School of Medicine in St. Louis where his research focuses on protein degradation and its role in degenerative neuromuscular diseases.

Registration in advance is required. <https://zoom.us/webinar/register/e67309408c5748544ac87b605f06faf5>

“The TMA pilot grant was an opportunity to perform a research study that would not be funded by any other agency.”
